Everything about .git

The flow

untracked / modified

→ when we create a new file / folder that comes under untracked File

→ those files are not atchully tracked by Git (in VS code it will show U Symbol Near to that file)

→ if we already had the file / folder and we modified that file it will show M Symbol in VS code

→ once we added those file it will be A

Staged Area

→ this is the place where all untracked / modified / newly added files are being tracked by git from now

Local Repository :-

→ this is The place we will store All our commit history inorder to publish into remote Repository

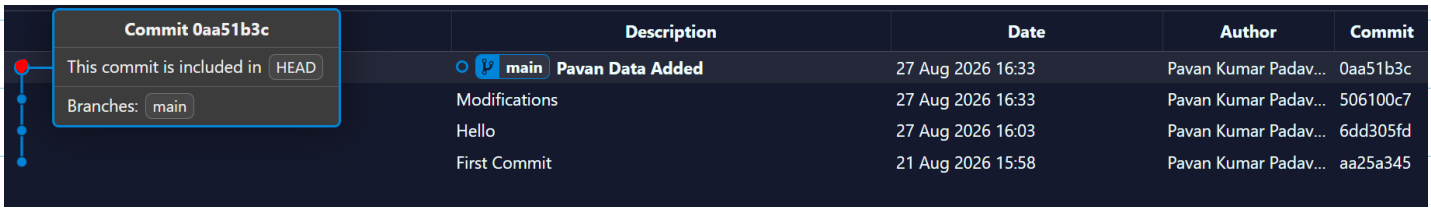

Remote Repository (Github)

→ This is a Cloud based replica of Git bur that was maintaining on Server

→ all the commit history from local Repositories will be Storing here

Look at Git Graph

Head

what is HEAD ?

→ the term head is the latest commit

→ whenever we create a branch in future we will create from Head of the current branch master / main / "Any Name"

what is LOG ?

HEAD →

>> git log

→ It will show you the complete history of all commits that are done so far

```
commit 0aa51b3ce755b03b578df1d654d8d84c18b1cbf3 (HEAD -> main)
Author: Pavan Kumar Padavala <pavankumarpadavala123@gmail.com>
Date:   Thu Aug 27 16:33:59 2026 +0530

    Pavan Data Added

commit 506100c713d1a9a407bae428246b2f1a2ad7d69d
Author: Pavan Kumar Padavala <pavankumarpadavala123@gmail.com>
